

DIRU-120/8F

DIRECTIONAL UHF ANTENNA YAGI WITH 8 ELEMENTS

YAGI type high-gain directional antenna, made of special aluminum alloy, with excellent mechanical resistance and high electrical conductivity.

The antenna is designed to prevent the build-up of electrostatic charges in the coaxial cable.

This feature allows for greater equipment protection and noise level reduction, allowing for optimal reception of distant signals.

In addition to being light weight and easy to install, it does not require field adjustments so that its VSWR remains below 1.5:1 across the entire operating frequency range.
